

Clinical Trials

from the patient perspective

Why Clinical Trials Matter

All new treatments must be proven to be safe and effective before they can be reviewed, approved for use, prescribed and taken by patients. This proof comes from clinical trials.

Because patients and caregivers are the experts at living with mitochondrial disease, your experiences matter. Patients help health teams, researchers, regulators, and payers (insurance), understand real-life experiences. Our input helps create better studies when we contribute to the purpose, protocols, outcomes, and impacts on quality of life.

Understanding Clinical Trials from the Patient Perspective

On Saturday, April 23rd at 3 pm EST, Dr. Aneal Khan, will join MitoCanada to present and answer your questions about participating in clinical trials. This free education session will:

- define what clinical trials are
- explain why they are important
- explore the potential benefits and risks of participating in a clinical trial
- highlight questions you should ask when considering participation in a clinical trials
- address common concerns and misconceptions

You will have the opportunity to ask Dr. Khan questions during this education event.

Join the session

This is a **free** session but you **must register** to attend and access the recorded session
